Hiring Manager
ACC, Auckland

Kia Ora,

I am writing to apply for the Technical Integration Analyst position at ACC. With a Bachelor of Information Technology and hands-on experience across full-stack development, business systems, technical analysis and API integration, I am particularly interested in this opportunity because it combines technical analysis with solving real business problems across complex enterprise systems.

In my current role at Auckland BioSciences, I work across software development, data, integrations and day-to-day technical support. A significant part of my work involves understanding operational requirements, identifying inefficiencies and translating those requirements into practical technical solutions. This has included developing full-stack internal applications, designing and maintaining Power BI reporting solutions, building custom solutions on JavaScript/TypeScript as well as Microsoft AL, and working with REST APIs and integrations between systems.

I have worked with business data and reporting through Power BI, giving me experience in understanding how information is structured, how data supports operational and management needs, and how technical solutions connect across systems. More recently, I have also been involved in integration work involving controlled access to business data and services, which has strengthened my interest in API design, system interfaces, and secure integration patterns.

I enjoy taking business problems from initial discussion through to implementation. This includes gathering requirements, understanding existing processes, defining solution behaviour, building the technical solution, and refining it based on user feedback. I have applied this approach across internal applications, workflow automation, reporting solutions, and system integrations.

My development experience has also given me a strong appreciation for maintainability, reliability, and disciplined software delivery through version control, GitHub-based workflows, and CI/CD practices. What particularly attracts me to this role is the opportunity to apply these skills across a larger enterprise environment while developing deeper experience in API-first and contract-first integration design, technical specifications, and modern integration patterns.

I also value the broader purpose of ACC and the opportunity to contribute to systems and services that support people across Aotearoa. I understand the importance of designing technology and services with accessibility, equity and Te Tiriti o Waitangi in mind, and I am committed to continuing to build my understanding in this area.

I would welcome the opportunity to discuss how my background in software development, APIs, data and technical integration could contribute to ACC's technology environment and the outcomes it delivers for New Zealanders.

Ngā mihi,
Victoryo Antonis Liu
